

Description

This module gives students their first experience of putting the scientific and research lessons learnt during Semesters 1 and 2 into practice.

Detailed objectives

Put knowledge and skills acquired into practice to create either:

- A scientific study about a technical or research issue
- A professional piece of work in the context of an internship or personal project

This work facilitates students' understanding of professional and scientific working methods studied during previous modules.

Assessment methods

Session 1

A report detailing the problem as well as possible solutions already explored, supported by related literature sources.

Session 2

Same as in Session 1.
